

Pervasive® DataExchange™

- ☑ Protection against Data Loss
- ☑ Real-Time Backup Replication
- ☑ Multiple Replication Sites Supported

Benefits:

- Increased application availability
- Reduced downtime and time to recovery
- Unified view of business data
- Improved data security with 128-bit encryption

Supported Platforms:

- Windows® 2000
- Windows 2003
- Windows Vista®
- Windows Server® 2008

Supported Databases:

- Pervasive® PSQL™ v9
- Pervasive PSQL Summit™ v10

Reliably Move Data Between Databases

Pervasive DataExchange offers two types of data replication solutions: real-time data backup of a single database and data synchronization between multiple applications. DataExchange provides a simple to use solution for securing and protecting your mission-critical data from application downtime and data loss.

Keep Business Data Secure and Organized

DataExchange meets your most important data replication needs. DataExchange Real-Time Backup Edition can help reduce disaster-related downtime with a remote backup of key application data. DataExchange Data Synchronization Edition can help keep a consistent set of data across multiple applications.

Real-Time Backup Increases Application Availability

Quick recovery is essential to minimize business losses during an application outage. DataExchange Real-Time Backup captures change events in the Pervasive PSQL database and replicates them to a secure remote always-available duplicate backup.

DataExchange reduces the loss of data and downtime associated with:

- Hardware Failure – computer or disk crashes
- Site Disaster – floods, fires or power outages
- User and Application Errors – accidental deletions, OS or application errors

DataExchange Real-Time Backup Edition helps reduce the recovery time in the event of a loss – no matter what the cause.

PERVASIVE™

Data Exchange™

Pervasive DataExchange

DataExchange Technology

DataExchange captures and shares changes from one Pervasive PSQL database to another by adding two software components to the database: Replication Event Handler and Replication Engine.

- Replication Event Handler plugs into the Pervasive PSQL database engine and logs inserts, updates and deletes.
- Replication Engine reads the tables created by the Event Handler and identifies records changed since the last replication session.
- Changes are grouped into packets and shared with other replication engines participating in a DataExchange network.
- Detecting and Resolving Conflicts – DataExchange has default and user-definable conflict resolution rules.
- Encrypting Communication – All communication between Pervasive PSQL servers is encrypted with a 128-bit key.

Pervasive DataExchange supports multiple replication networks

About Pervasive Software

Pervasive Software helps companies get the most out of their data investments through embeddable data management and agile integration software. The embeddable PSQL database engine allows organizations to successfully embrace new technologies while maintaining application compatibility and robust database reliability in a near-zero DBA environment. For more than two decades, Pervasive products have delivered value with a compelling combination of performance, flexibility, reliability and low total cost of ownership.
