

Pervasive® PSQL Summit™ v10 for Linux

- ☑ Works with Red Hat®, SUSE™ and Other Leading Linux Distributions
- ☑ High Performance, Reliability and Security
- ☑ Available in 32-bit and 64-bit Editions
- ☑ Low Total Cost of Ownership

Benefits:

- Improved application performance
- 32-bit and 64-bit support
- Linux-HA Heartbeat support
- Simple migration from previous PSQL versions

Supported Platforms:

- Red Hat Enterprise Linux 4 and 5
- SUSE Linux Enterprise 9 and 10
- Linux 2.6 kernel or higher

Linux growth in the database market has outpaced all other platforms. Low cost, reliability, security and performance, all hallmarks of Linux, are the key reasons more and more businesses are moving to Linux database applications. Migrating existing PSQL applications to Linux is simple and quick. Take advantage of the cost savings and performance of a move to Linux with Pervasive PSQL Summit v10.

The Challenge

Linux is the fastest growing segment of the database server market. According to Gartner Group, Linux is the fastest growing operating system in the RDBMS market with 67% gain in market share. Linux server purchases will increase 41% in the next 5 years. Linux service revenues in the same period will increase a staggering 176%. While Linux has many advantages – cost savings, reliability and performance improvements – the trick is to easily migrate applications to this new platform. How can businesses make the move to Linux without incurring high development costs, and still maintain quality, reliability, and performance?

The Solution

The best choice is PSQL Summit v10 for Linux, the award-winning database from Pervasive. It's the database uniquely suited to Linux and small to mid-sized businesses.

Easy Migration

Many businesses are transitioning from other platforms to Linux. With PSQL Summit v10, moving to Linux won't require an application modification or rewrite. Just install PSQL v10 for Linux server and move the existing PSQL files to the new database.

PSQL Summit v10 for Linux supports many of the same API's available for Windows, and can run on Linux releases from Red Hat and SUSE. With PSQL Summit v10 we make it easy. Michael Owens, CTO, CENTURY 21 Mike Bowman Inc., had this to say about our Linux support, "It was really easy to switch from a Windows server to a Linux server. Your product has made my job so much easier."

Reliability – The stability, reliability and scalability of the Pervasive database engine are legendary. Whether users are running applications on a desktop, server, or scaling to thousands of concurrent users on a Web-hosted application, PSQL Summit v10 meets the need. With Linux reliability and high uptime, businesses can rest easy knowing that critical data will be there when it needs to be – today and tomorrow.

Pervasive PSQL Summit v10 for Linux

Security – Data is the lifeblood of an organization and must be kept secure. PSQL Summit v10 meets the challenge with access control mechanisms that best fit customers’ needs. Its flexible security architecture provides many different options, including data-on-disk encryption, network encryption, and user-level security for the transactional and relational access paradigms.

Performance – PSQL Summit v10 for Linux supports the latest 64-bit hardware and operating systems. With more memory and address space, up to 4TB, cache will become a significant advantage for client/server applications. PSQL Summit v10 includes native 64-bit API support for Btrieve and DTI.

Linux has always been known for performance. Similarly, PSQL Summit v10 is a performance powerhouse. With support for Linux High-Availability Heartbeat, PSQL Summit v10 can now be used in clustering applications.

Low Cost of Ownership – “Set it and forget it” is the Holy Grail of the IT world. Downtime due to system error or database maintenance directly affects the bottom line: every time workers cannot access information, customer accounts are unavailable, or orders are misplaced; money and time are lost. With other platform/database combinations, the costs associated with ensuring data availability 24/7 can skyrocket. Keeping these costs under control is where the low-TCO mindset, common to both Linux and PSQL Summit v10, comes into play. Their low resource

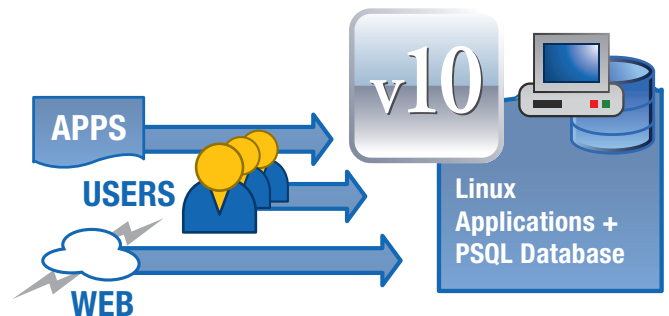

requirements, flexible configurations and dynamic, self-adjusting technology ensure that businesses can focus on customers – and not on the database.

Experience

PSQL Summit v10 and Linux are well-matched in terms of experience. Pervasive Software has been delivering reliable, high performance embedded database technology for over 25 years. And the Linux platform embodies the cumulative experience of thousands of developers around the world. Put them together and no one else comes close to matching the reliability, performance and low TCO that the Pervasive/Linux combination offers.

PSQL and Linux – The Complete Solution

PSQL Summit v10 is the database for delivering a complete Linux solution that is fast, secure, reliable, and best of all, low-cost. With Pervasive and Linux businesses can optimize their technical and financial performance.

About Pervasive Software

Pervasive Software helps companies get the most out of their data investments through embeddable data management and agile integration software. The embeddable PSQL database engine allows organizations to successfully embrace new technologies while maintaining application compatibility and robust database reliability in a near-zero DBA environment. For more than two decades, Pervasive products have delivered value with a compelling combination of performance, flexibility, reliability and low total cost of ownership.
