

# Microsoft Dynamics™ Connection Options

Pervasive® Data Integrator™ has a variety of connection strategies for each Microsoft Dynamics application depending on which one suits your business needs and infrastructure. Pervasive Data Integrator can also interface with Microsoft BizTalk Server through MSMQ.

## Microsoft Dynamics CRM

Pervasive Data Integrator provides instant native connection to all Microsoft Dynamics CRM objects, including custom objects.

## Microsoft Dynamics GP

Pervasive Data Integrator can take advantage of all four options for integration connectivity provided by Microsoft Dynamics GP, formerly Microsoft Great Plains, through its eConnect set of tools.

- COM
- Web Services – For synchronous processing, Pervasive Data Integrator translates data to XML and invokes
- MSMQ – For asynchronous processing, Pervasive Data Integrator translates data to XML and pushes to queue
- Stored procedures

## Microsoft Dynamics NAV

- Web Services – For synchronous processing, Pervasive Data Integrator translates data to XML and invokes
- MSMQ – For asynchronous processing, Pervasive Data Integrator translates data to XML and pushes to queue

## Microsoft Dynamics AX

Pervasive Data Integrator can take advantage of both options for integration connectivity offered by Microsoft Dynamics AX, formerly Microsoft Axapta 3.0 Commerce Gateway, through its Application Integration Framework (AIF).

- Web Services – For synchronous processing, Pervasive Data Integrator translates data to XML and invokes
- MSMQ – For asynchronous processing, Pervasive Data Integrator translates data to XML and pushes to queue

## Microsoft Dynamics SL

- COM
- ASCII text files
- ODBC
