

## Introducing a universal SaaS, data and application integration platform from Pervasive®

***Versatility, comprehensive connectivity, and more productivity are yours***

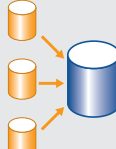

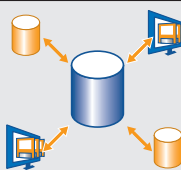

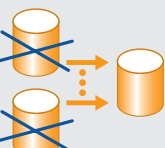

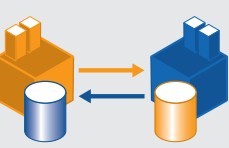

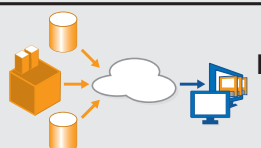

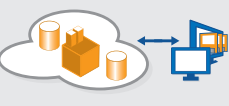

- SaaS applications integration
- On-premises integration
- Integration behind the firewall
- Embedded integration for ISVs
- A range of other scenarios – Contact Us!

*Designed to meet the challenges of a wide variety of integration scenarios, Pervasive's integration platform will help you adapt to rapid changes in your data and IT landscape, including:*

- SOA and message-based architectures
- Web-based systems
- Legacy systems
- Prior-generation file formats and databases
- Unstructured content including email, report and print files

With Pervasive integration products, organizations of all sizes can rapidly build integration processes that adapt to change while delivering the lowest total cost of ownership. And our unparalleled breadth of connectivity—150+ connectors for virtually all data and application formats—combined with our 20+ years experience and thousands of satisfied customers, ensure a powerful platform for your success.

*Pervasive's integration platform will speed your implementation across a wide variety of integration scenarios.*

	<b>Data Warehouse</b>	Data Marts Operational Data Stores Real-Time Reporting Profiling/Remediation
	<b>Master Data Management</b>	Customer Data Integration Reference Data Management Single View of Data
	<b>Data Migration</b>	CRM and ERP Implementation, including SaaS System Consolidation New Application Implementation Legacy Conversion
	<b>Business Integration</b>	Application Integration CRM/ERP Synchronization, including SaaS Business-to-Business Automation Claims/Billing/Payment Processing
	<b>Data Services for SOA</b>	Application and Data Adapters Embeddable Integration Enterprise Information Integration (EII)
	<b>Hosted Integration as a Service</b>	Hosted by Pervasive Hosted by SaaS Provider

## Integration scenarios for Pervasive's universal integration platform.

### Data Warehousing

Create and maintain data warehouses, data marts, and operational data stores using Pervasive's integration platform.

- Fastest time to value with an easy-to-learn and deploy design environment
- Comprehensive connectivity to 150+ data and application data formats—including Excel spreadsheets, text files, PDF files and more
- Batch, event, and real-time processing deliver the right information at the right time

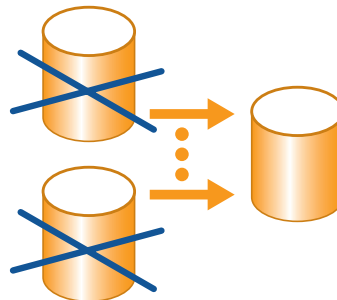

*Quickly aggregate, profile, and store data from hundreds of information sources accurately and efficiently.*

### Data Migration

The demand to reduce costs and the results of mergers and acquisitions often leads organizations to consolidate systems or purchase new applications to achieve best-in-class efficiencies.

Pervasive has helped hundreds of organizations successfully complete their complex data migration projects under budget and with greater accuracy by providing a flexible, process-driven tool set.

- Build repeatable and auditable migrations with Pervasive process and mapping designers
- Comprehensive connectivity to 150+ data and application sources—including mainframe, semi-structured and report and print extract formats
- Accelerate projects with 150+ pre-built functions to reconcile and normalize data
- Robust data profiling to discover content, structure and quality of data and ensure that new applications incorporate accurate, reliable data.

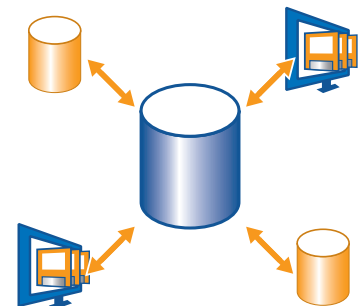

*Pervasive reduces the pain of legacy conversion, system consolidation and new application implementation.*

### Master Data Management

Pervasive offers a powerful combination of tools to deliver a holistic master data management (MDM) solution. The Pervasive product set provides a single data integration platform to help organizations access, transform, and design MDM process flows while integrating master data from a wide variety of systems.

With these foundational components, organizations can build process workflows that define master data management for customer data, product data, claims data, policy data, transaction data and more.

- Comprehensive connectivity to 150+ data and application sources
- Support for CRM, ERP, accounting and messaging technologies
- Accelerate projects with 150 pre-built functions to re-format data from different systems
- Enhance the quality of your information as master data stores are built by cleansing data on the fly

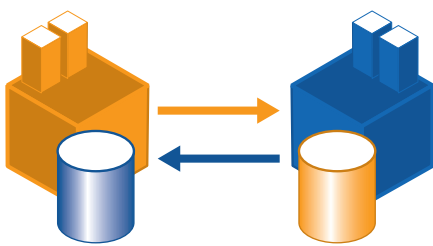

*Create reference data sources and single views of customers, products, health records, and financial transactions—leveraging the versatility of Pervasive's integration platform.*

## Business Integration

Create and manage business-to-business data exchange projects inside and outside the firewall. Pervasive's integration platform helps organizations convert unstructured data to structured/standards compliant data and/or backend databases. It speeds the creation of automated data feeds that would otherwise consume IT resources and drain operating budgets.

- Synchronize data in batch, event-driven and real-time feeds, whatever the requirements
- Automate the movement and transformation of data between customers, partners and suppliers

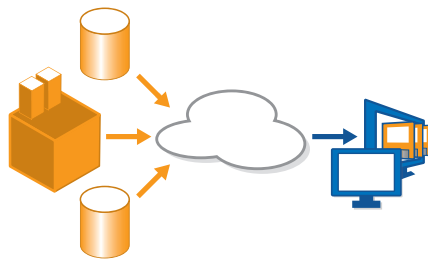

*Faster implementation, lower total cost of ownership for healthcare data processing, payer/provider processing, employee benefits and other process automation.*

## Data Services for SOA

Getting to "hard-to-reach" and prior generation data and applications can be difficult, costly and time consuming. Pervasive's Data Services for SOA eliminates the complexity of low-level interface coding, while allowing companies to leverage legacy data with new SOA-based ESB, BPM, Application Servers and J2EE-based systems.

- Build reusable data services by aggregating and transforming information from over 200 data and application sources
- Eliminate the risk and complexity of custom coded adapters
- Buffer SOA clients from low-level changes by creating an abstraction layer

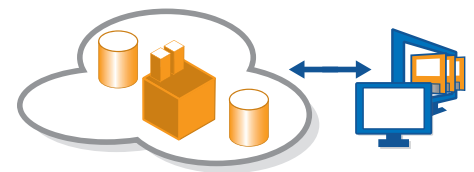

*Enable the "last mile" of SOA with data and integration services for SOA.*

## Hosted Integration as a Service

Integration can now be hosted within a SaaS application or on the Pervasive DataCloud™ on-demand integration platform. Seamlessly pull SaaS applications together with hosted integration or bridge firewalls to reach on-premise applications with our on-demand data gateways.

- Connect to SaaS applications with out-of-the-box adapters
- On-ramp customers rapidly as our team handles integration from beginning to end with minimal infrastructure to install, and no training required
- Adapt to change easily with updates and improvements deployed across the web

*Integrate SaaS and on-premise applications conveniently and cost-effectively using the integration as a service model.*

## Comprehensive Connectivity

Pervasive connectors enable rapid access to heterogeneous data. A comprehensive set of 150+ connectors allows a broad range of seamless connectivity to file systems, databases, message buses, EDI networks, Web-enabled applications, business applications and industry-standard protocols on numerous platforms. Also included is Pervasive's unique capability to process non-relational and semi-structured content buried in most companies.

## About Pervasive Software

Pervasive Software provides agile data integration software that speeds the flow of data between applications and between organizations. Our robust technology addresses SaaS, SOA and traditional integration modes and allows customers to re-use the same software for integration scenarios that span data warehouses, real-time application integration and data exchange with trading partners.
